since its creation at the beginning of world ii radars have forever transformed the practice of modern warfare the evolution of countermeasure conducted by electronic warfare systems against radars and radars corresponding counter countermeasures is an intriguing technical subject this book provides a very accessible introduction to a broad range of radar and electronic warfare technologies the subjects covered in this book range from early radar development to later technologies such as stealthy techniques low probability of intercept radar and machine learning historical events are used to illustrate the principles of electronic warfare and to help readers to apprehend contexts under which radars and corresponding electronic warfare techniques were developed

introduction in this study deductions concerning the growth of snow crystals are made from measurements of the radar echo from steady snow at various levels in the atmosphere cunningham 1 used radar observations to help in formulating a hypothesis for the growth and melting of snowflakes and the subseaut growth of the water drops in a particular storm in his study the radar observations were of a qualitative nature since they consisted of photographs of the rhi scope the theory of the variation with elevation of the radar echo intensity in widespread steady precipitation was analyzed by wexler 2 and comparison was made with radar observations of warm front precipitation by browne at cambridge university england the theory is repeated here with modification the intensity of the radar signal from precipitation is dependent upon the size shape number and composition ice or water of the scattering particles all of these various characteristics cannot be learned from the radar measurements alone but useful deductions can be made when other available information such as radiosonde and wind data is considered in conjunction with the radar observations in particular because of the sensitive dependence of radar reflectivity upon particle size it appears reasonable to attempt to interpret an increase in radar signal strength in terms of particle growth
