modes of uncertainty offers groundbreaking ways of thinking about danger risk and uncertainty from an analytical and anthropological perspective our world the contributors show is increasingly populated by forms practices and events whose uncertainty cannot be reduced to risk and thus it is vital to distinguish between the two drawing the lines between them they argue that the study of uncertainty should not focus solely on the appearance of new risks and dangers which no doubt abound but also on how uncertainty itself should be defined and what the implications might be for policy and government organizing contributions from various anthropological subfields including economics business security humanitarianism health and environment limor samimian darash and paul rabinow offer new tools with which to consider uncertainty its management and the differing modes of subjectivity appropriate to it taking up policies and experiences as objects of research and analysis the essays here seek a rigorous inquiry into a sound conceptualization of uncertainty in order to better confront contemporary problems ultimately they open the way for a participatory anthropology that asks crucial questions about our contemporary state

uncertainty is a prevalent characteristic of contemporary life and a central challenge of hci as humans researchers and designers we encounter uncertainty in a multitude of forms and a variety of settings the growing attention to uncertainty in hci is due to the ever increasing expansion of the field and questions and contexts to which we seek to apply hci research and practice it is also due to events in the world that force us to engage more directly with questions related to uncertainty consequently society is turning more than ever to data as a means to enable or mediate our understanding of phenomena such as climate change political turmoil increased economic upheaval and a global pandemic this monograph examines how hci conceptualizes situates and responds to uncertainty particularly arguing that our ability to respond to such uncertainties is governed to a great extent by the concepts we use to enframe a single encompassing overburdened and slippery idea the authors propose four distinct modes of uncertainty to begin to draw together the varied strands of work in hci that address uncertainty in its many forms rather than focusing on uncertainty as a discrete phenomenon in the world to be studied they look to how research goals methods and theoretical frames used in hci research influence the various ways in which we encounter it by switching from uncertainty a noun to modes of engaging uncertainty a verb they foreground uncertainty as a relational concept and show that it is an active and ongoing condition that designers and researchers make present in different fashions depending upon their priorities and the context in which they are working the authors show that adding modes of uncertainty to our conceptual toolbox facilitates conversation between domains and lets us draw new connections between disparate areas of research including visualization studies critical design feminist epistemologies and sustainability

we stand at the threshold of an exciting era of asteroseismology in a few months time the canadian small satellite asteroseismology mission most will be launched danish and french missions mons and corot should follow with the esa mission eddington following in 2007 8 helioseismology has proved spectacularly successful in imaging the internal structure and dynamics of the sun and probing the physics of the solar interior ground based observations have detected solar like oscillations on alpha centauri a and other sun like stars and diagnostics similar to those used in helioseismology are now being used to test and constrain the physics and evolutionary state of these stars multi mode oscillations are being observed
